

Github Repo

Frontend

backend

Running Locally

Backend Setup

clone backend repo using: `git clone --branch backend https://github.com/ishanExtreme/Transaction-Manager.git`

- Step1: Create a new python environment
- Step2: run `pip install -r requirements/local.txt`
- Step3: run `python manage.py migrate`
- Step4: run `python manage.py runserver`

Good to go!!

Frontend Setup

clone frontend repo using `git clone --branch frontend https://github.com/ishanExtreme/Transaction-Manager.git`

- Step1: `npm i`
- Step 2: `npm start`

Note: run backend on 8000, if backend is running on some different port, change url from `src/api/api.tsx`

Good To go!!
